

## Software Engineer

**Nauticast GmbH** is a company specializing in the field of maritime AIS technology. Hard- and software are developed in-house, manufactured with partners and marketed worldwide. Ever since the pioneering days of AIS-technology in the early 2000s Nauticast AIS played a major role in the maritime market. As a vital part of our product development team we are looking for a Software Engineer.

### Tasks:

- Software development for marine electronics (Embedded Systems, HMI and Windows applications with QT, QML)
- Maintenance and improvement of Factory Acceptance Tests (FAT) – C#
- Embedded RTOS

### Technologies and Tools required

- QT Framework
- Embedded RTOS (C++)
- C# development in Visual Studio

### Skills:

- Software Architecture & hardware-related programming
- Enthusiasm and Commitment
- Communication in German and English both in writing and orally
- Interest in maritime activities
- Hands-on mentality

### Formation/Experience:

- Minimum Bachelor degree, university or university of applied sciences
- Minimum 1 year working experience in professional development

We offer to directly participate in interesting and exciting technical projects in a very relaxed and informal corporate culture. Working hours are highly flexible and should be in the range of 20 to 38.5 hours per week. Minimal gross salary of the position according to Kollektivvertrag is € 2,461 per month on a 38.5 hours/week basis. Individual agreements will be discussed depending on educational background and working experience.

We are looking forward to your application addressed directly to the company director Vinzenz Janik at [janik@nauticast.com](mailto:janik@nauticast.com).
